

Buying house with solar panels

Overview

Should you buy a home with solar panels?

The ideal situation when you're looking at properties with solar is for the panels to be owned by the current homeowner. Panels purchased upfront are owned entirely by the seller, meaning they don't come with any strings attached (aside from potentially paying a little more due to the increased home value that comes with solar).

Should you buy a solar home if you're not the original owner?

Solar will save almost all homeowners money, even if you're not the original owner. You might encounter one of four solar home scenarios when you're shopping for a house: fully-owned solar panels, leased solar panels, solar panels purchased with a solar loan, and PACE (Property Assessed Clean Energy) financed solar panels.

Should I buy a solar home if I can't afford a loan?

Paying that loan is money that can't go to your mortgage, meaning the mortgage a bank approves could be lower than the amount you need. If you cannot afford both a loan and mortgage payment, skip the solar home. Leased solar panels are the worst-case scenario when buying a house with solar panels.

Is buying a home with solar panels the right move?

Currently, solar power accounts for just 3.9 percent of total U.S. electricity generation, but that number is rapidly growing. So is buying a home with solar panels the right move for you?

Well, that depends on some key factors.

Should you buy or lease solar panels?

Owning the solar panels on your house is the best financial decision, according

to Consumer Reports, since solar panel lessees save less than those who purchase them outright. You might save some money up front with a lease, but you may lose that advantage when buying a home with existing leased panels.

Should you buy a home with a third-party Solar System?

When buying a house with solar panels, homebuyers should ask whether the solar system is owned outright by the seller or whether they would have to take over a lease' (SEIA vice president of markets and research, Justin Baca).
