

# Can you install your own solar panels

## Overview

---

Can I install my own solar panels?

Installing your own solar panels can be legal and cost-effective, but navigating the regulations requires careful planning. Most states allow homeowners to install solar panels themselves, provided they obtain proper permits, follow local building codes, and pass required inspections.

Is DIY solar installation a good idea?

DIY solar installation helps you cut costs — most homeowners save up to 10%. However, DIY installation is better suited to small-scale projects than whole-home conversions. Installing solar panels may require professional help or special permits, depending on where you live.

Should you install solar panels without a permit?

Don't skip this crucial step – installing solar panels without proper permits can result in fines, mandatory system removal, or complications when selling your home. Many localities also require certification of your installation by a licensed electrician, even if you do the main installation work yourself.

Are solar panels a good DIY project?

Solar panel installation can be satisfying, but only if you're deliberately looking for a major DIY project. However, you might want to avoid taking on solar if your prior DIY skill is limited to assembling Scandinavian flat-pack furniture.

Should you set up solar panels?

Ultimately, if you're someone who enjoys hard, technical work, setting up solar panels is a rewarding process. If you're neither the dedicated DIY type nor someone with extensive knowledge of solar energy, then you may want to sit this one out.

How much does it cost to install your own solar panels?

In contrast, our 8kW DIY solar kits currently range from \$10k-\$15k depending on the components selected. So, after factoring in taxes, shipping, and associated costs, you could save more than \$10,000 on your solar project by installing the system yourself. So what does it take to install your own solar panels?
