

Cleaning my solar panels

Overview

How to clean solar panels?

The best way to clean solar panels starts with a gentle brushing. Otherwise, if a lot of material is sitting on solar panels, immediately mixing the debris with water might cause spread and smear. Brushing breaks down and removes some material, making the next steps in the cleaning process more effective.

How often should you clean your solar panels?

If you have a residential solar energy system installed, you should clean your solar panels as often as you clean your roof. Most people don't clean their roofs very often, and the same logic applies to solar panels. Rain can help clean them, but it's not enough to rely on solely.

How do you clean a solar array?

When arrays are within reach, you use a soft, non-abrasive brush and soapy water to clean your system, in the same way you would clean your car or RV, safely wiping away any debris without scratching the surface of the panels.

How do you clean a solar panel if it rains?

Leaves, bird droppings, and dust accumulate on solar panels. Even though rain clears some of this, it doesn't get everything and can create dirty residue when puddles evaporate. Debris can be removed with gentle brushing from a soft-bristled tool to start the cleaning process.

How long does it take to clean solar panels?

The exact time it takes to clean solar panels varies depending on a number of factors, like how many solar panels you have, the cleaning method you use, and whether or not you have someone to help you. On average, though, expect to spend about 1 to 2 hours.

Do solar panels need cleaning?

There are some instances where solar panels might need cleaning, but most of the evidence says solar panels are self-sufficient and low-maintenance. We'll get to the best way to clean your solar panels in a minute.
