

Compare houses for solar power

Overview

Can solar panels power a home?

Solar panels are used to power everything from calculators to sports stadiums to satellites — and they can just as easily be used to power a home. You don't need to be a rocket scientist – or anything close to it – to get solar panels for your home.

What are the best solar panels for homes?

We recommend Blue Raven Solar for the best solar panels for homes. The company offers a wide range of high-efficiency solar panels designed to maximize energy production and savings. In addition, its in-house financing options make the transition to solar more affordable, with low-interest loans that help manage upfront costs.

How do I choose the best home solar panels?

When it comes to choosing the best home solar systems, understanding the types of solar panels available is crucial. There are three main types: monocrystalline, polycrystalline, and thin-film. Each has its own benefits and drawbacks in terms of efficiency, durability, and cost. Monocrystalline panels are made from a single, pure silicon crystal.

Should you buy a home with solar panels?

The ideal situation when you're looking at properties with solar is for the panels to be owned by the current homeowner. Panels purchased upfront are owned entirely by the seller, meaning they don't come with any strings attached (aside from potentially paying a little more due to the increased home value that comes with solar).

Do solar panels increase home value?

Speaking of putting wasted space to good use, installing solar panels also raises your home value. Studies by Zillow and the Berkeley Lab both found

that homes with solar panels sell for more money than comparable homes without them. Better yet, over 30 states have property tax exemptions for the value that solar adds to the home.

What are the different types of solar home scenarios?

You might encounter one of four solar home scenarios when you're shopping for a house: fully-owned solar panels, leased solar panels, solar panels purchased with a solar loan, and PACE (Property Assessed Clean Energy) financed solar panels. Here's what you should know about each scenario.
