

# **Diagram of solar system planets**

## Overview

---

What is a diagram of the Solar System with labels?

A diagram of the solar system with labels can provide an easy-to-understand representation of the different celestial bodies and their locations. In the center of the diagram is the sun, a massive ball of hot gas that provides heat and light to all the planets. Surrounding the sun are the inner planets, also known as the terrestrial planets.

Why do we need a diagram of the Solar System?

The solar system is an incredible and expansive place, with the sun at the center and countless planets, moons, asteroids, and comets orbiting it. A diagram of the solar system with labels can provide an easy-to-understand representation of the different celestial bodies and their locations.

Can I print a solar system diagram?

The solar system diagram is available in both color and black and white. It was created for classroom and educational use for students, parents and teachers. You may print it for any personal and educational project. The planets are roughly to scale relative to one another. You may not post this content on your own website.

What planets are in the Solar System?

As you zoom out, the solar system's outer planets – Jupiter, Saturn, Uranus and Neptune – come into view. The date slider allows you to move forwards or backwards by a few months to see the motion of the planets along their orbits. The top panel shows where the planets appear in the night sky from the Earth.

How many planets are in the Solar System?

What are the planets in the solar system?

There are eight planets in the solar system. The four inner terrestrial planets are Mercury, Venus, Earth, and Mars, all of which consist mainly of rock. The four outer planets are Jupiter, Saturn, Neptune, and Uranus, giant planets that consist mainly of either gases or ice.

What planets are in the center of a planet diagram?

In the center of the diagram is the sun, a massive ball of hot gas that provides heat and light to all the planets. Surrounding the sun are the inner planets, also known as the terrestrial planets. These include Mercury, Venus, Earth, and Mars. They are called terrestrial because they have solid, rocky surfaces.
