How do I use Interactive Solar System map?

Interactive Solar System Map How it works: Hover over the object to get a “tooltip”. Left-Click on the object to display a mini gallery of photos. Use the arrows on the left and right to switch between them or use the right/left arrow on the keyboard to navigate. To leave the mini gallery press ESC on your keyboard or click X in the right corner.

What is a 3D model of the Solar System?

The exceptional 3D model of the solar system found above was developed by Sunaeon. There are three main modes of this model. The first is the heliocentric (sun-centered) mode of the solar system. If, while in this mode a planet is double-clicked, the model takes on the perspective of the solar system as viewed from the planet.

What planets are in the Solar System?

As you zoom out, the solar system's outer planets – Jupiter, Saturn, Uranus and Neptune – come into view. The date slider allows you to move forwards or backwards by a few months to see the motion of the planets along their orbits. The top panel shows where the planets appear in the night sky from the Earth.

What are the three modes of a solar system model?

There are three main modes of this model. The first is the heliocentric (sun-centered) mode of the solar system. If, while in this mode a planet is double-clicked, the model takes on the perspective of the solar system as viewed from the planet. The second mode is the geocentric (Earth-centered) view of the solar system.

How many planets are in the Solar System?

What are the planets in the solar system?

There are eight planets in the solar system. The four inner terrestrial planets are Mercury, Venus, Earth, and Mars, all of which consist mainly of rock. The four outer planets are Jupiter, Saturn, Neptune, and Uranus, giant planets that consist mainly of either gases or ice.

What is a solar system tour?

An interactive and free tour of the solar system. This stunning solar system model lets you explore the entire solar system, from the Sun to Pluto.
