Government subsidy for container solar solutions in Mexico

Overview

Should solar panels be deployed in northern Mexico?

Questions regarding future technologies and innovation. The initiative to deploy solar panels in the northern regions of Mexico is a commendable strategy that aligns with environmental sustainability and energy independence goals. High temperatures and abundant sunlight make northern Mexico an ideal location for solar energy production.

Why are solar projects a problem in Mexico?

Consequently, the technical and commercial risks associated with projects are often estimated as being too high and therefore prevent project developers from investing in solar energy technologies. National financial institutions in Mexico also have little experience in evaluating and financing large-scale solar projects.

Can solar panels be used at night in Mexico?

Having a battery bank in your home to store the energy your panels produce during the day is a thing of the past, now you can feed the utility grid in Mexico during the day while your solar panels are generating and utilize the grid's energy during the night at no cost to you.

How will CFE use the solar bond scheme?

CFE will use the solar bond scheme to install PV systems in residential areas, providing users with enough electricity to meet their needs and sending excess electricity back to the grid. We expect this program to lead to lower costs for the user as well as lower subsidy costs for CFE.
