

# **Government subsidy for container solar solutions in Norway**

## Overview

---

The subsidy for solar installations post-October 2023 is NOK 7,500 + NOK 1,250 per kW installed. Calculate the potential subsidy you can receive based on your installation's capacity. Not sure about your installation capacity?

What are the new solar rebates in Norway?

Norway's clean energy agency Enova will increase the maximum PV system size eligible for rebates from 15 to 20 kW and the maximum subsidy amount from 1,250 to 2,000 NOK (\$226.7) per kW installed. In addition, new subsidies of up to 10,000 NOK will be introduced for energy management systems that are often installed alongside solar arrays.

How much solar power does Norway have in 2023?

In 2023, solar PV provided 1% of the electricity into the Finnish grid (Electricity Maps, 2024). Norway, having had plenty of hydropower, only recently began to tap into solar energy. The Norwegian Water Resources and Energy Directorate (NVE, 2024) reported a total installed capacity of around 0.6 GW by the end of 2023.

What is Norway's new state guarantee scheme?

Through the new state guarantee scheme, Norway will help to mobilise both private and public sector capital for investments in renewable energy in developing countries by reducing risk and thereby lowering capital costs for investors. The scheme is a pilot with a duration of five years and a guarantee budget of NOK 5 billion.

Why are solar PV installations increasing in Sweden?

In Sweden, solar PV installations have grown exponentially. As of 2023, the country had a total installed solar PV capacity of 4.1 GW. This surge is largely attributed to government initiatives such as investment support schemes, which cover up to 20% of the installation costs for solar PV systems.

How much solar power does Norway have?

The Norwegian Water Resources and Energy Directorate (NVE, 2024) reported a total installed capacity of around 0.6 GW by the end of 2023. About half of the capacity is installed on households - the rest for industrial and commercial use, with a very limited Utility scale solar.

Is solar energy a viable option in Europe?

The country is rapidly expanding its solar footprint and is expected to reach 11.7 GW by 2030 (Solar Power Europe, 2023), where most of these are expected at utility scale. The government supports solar PV installations through net metering schemes and tax exemptions, making solar energy a viable and attractive option.
