Overview

You can apply for the sustainable energy investment subsidy scheme (Investeringssubsidie duurzame energie, ISDE, in Dutch). This subsidy will partly compensate for the initial investment costs of the device.

You can apply for the sustainable energy investment subsidy scheme (Investeringssubsidie duurzame energie, ISDE, in Dutch). This subsidy will partly compensate for the initial investment costs of the device.

Do you want to make your business premises more sustainable, for instance by installing a solar boiler or heat pump?

You can apply for the sustainable energy investment subsidy scheme (Investeringssubsidie duurzame energie, ISDE, in Dutch). This subsidy will partly compensate for the initial.

Netherlands' climate minister has allocated €100 million in subsidies to the deployment of 'time-shifting' battery storage with solar PV projects for next year, an acceleration of a larger €400 million-plus programme. Minister for climate and energy policy and D66 party leader Rob Jetten announced.

A Dutch subsidy scheme for renewable energy saw solar applications fall to 501 this year from 1,130 in 2023, as grid congestion and negative electricity prices reduced investment appeal. Rijksdienst voor Ondernemend Nederland (RVO), the Dutch state-run agency that manages the the country's.

The climate minister of the Netherlands, Rob Jetten, has declared an early release of €100 million subsidy for the installation of 'time-shifting' battery storage integrated with solar PV undertakings for the upcoming year. This initiative is a fast track of a wider €400 million-plus scheme under.

Without urgent upgrades to grid flexibility, fairer subsidy design, and long-term regulatory clarity, the Netherlands risks a solar stagnation—just as the sector becomes central to its decarbonization goals. The Netherlands' solar development is underpinned by the SDE++ subsidy scheme, which builds.

The Netherlands has launched the latest round of its renewable energy subsidy programme SDE+ this week, with a budget to the tune of €5 billion (~US\$5.6 billion). Stakeholders can now apply for the Autumn support packages for technologies related to five categories: biomass, geothermal, water, wind. Why does Germany need a solar-plus-storage subsidy?

That compares to the effective 100% requirement that solar-plus-storage projects used to need in order to qualify for an investment tax credit (ITC) in the US, and still do for Germany's Innovation Tender. The subsidy is needed because BESS co-located with PV are 'not profitable', the government said.

What is the SDE+ subsidy scheme?

The Netherlands' solar development is underpinned by the SDE++ subsidy scheme, which builds upon the former SDE+ mechanism. The program supports both renewable energy generation and CO₂-reducing technologies. To date, it has allocated funding for 11 GW of solar capacity, primarily for commercial rooftop and ground-mounted systems.

Who is eligible for the ISDE subsidy scheme?

If your product (heat pump, solar boiler, lowemission or low-E glass, or insulation material) is listed, you customers know they may be eligible for the ISDE. How to apply?

You can apply for the ISDE subsidy scheme (in Dutch) to the Netherlands Enterprise Agency (RVO).

What is the €100 million Bess scheme?

The €100 million (US\$106 million) allocation is part of a €416 million package for PV co-located battery energy storage system (BESS) technology that was initially to total €41.6 million a year, starting in 2025, for ten years. The 2025 programme is set to open on 1 January 2025, and more details will be released to the House later this year.

How much does a kWh subsidy cost?

The initial estimate for the subsidy is €0.14-29 per kWh of energy discharged. Independent research and consultancy organisation CE Delft has been heavily involved in the analysis of the scheme until now.

Is the net metering scheme still sustainable?

Wijnand van Hooff, general manager of Holland Solar, said that the current net-metering scheme is no longer sustainable. “PV system owners are increasingly confronted with grid fees that energy suppliers charge to cover the rising costs of the net metering scheme,” he said.
