

Government subsidy for pv storage container in Vietnam

Overview

Vietnam's Ministry of Industry and Trade (MOIT) has announced a new round of feed-in tariffs (FIT) for solar power, introducing location-based pricing and, for the first time, incorporating energy storage systems.

Vietnam's Ministry of Industry and Trade (MOIT) has announced a new round of feed-in tariffs (FIT) for solar power, introducing location-based pricing and, for the first time, incorporating energy storage systems.

Vietnam's Ministry of Industry and Trade (MOIT) has announced a new round of feed-in tariffs (FIT) for solar power, introducing location-based pricing and, for the first time, incorporating energy storage systems. The updated scheme highlights the growing importance of storage in stabilizing the.

The Vietnamese authorities released the feed-in tariff levels for ground-mounted and floating PV plants, with or without storage. Vietnam's Ministry of Industry and Trade (MOIT) has published the new feed-in tariffs for utility-scale solar plants. For projects without battery storage, the tariff.

Vietnam is taking another step toward modernizing its renewable energy sector by unveiling updated feed-in tariffs (FiTs) for solar power, with a notable emphasis on encouraging battery energy storage systems (BESS). This policy move, effective throughout 2025, was formalized through Decision.

Vietnam's solar power sector is governed by a number of key regulations and policies aimed at promoting the development of renewable energy while managing the challenges associated with rapid growth. The FiT program has been a major driver of solar power development in Vietnam, offering a tariff of.

rooftop solar PV during 2020. The government is currently figuring out the (BESS) solve this variability. GEAPP aims to enable ~200MW of BESS by 2024 through a mix of direct GEAPP high-risk capital and other concessional and commercial funding. By doing this we can reframe battery storage as a.

Vietnamese authorities are looking to retroactively revise purchase prices for 173 solar and wind projects, reducing revenues by 25% to 46%, risking bankruptcies across the renewable energy sector, and jeopardizing investor confidence needed to meet the government's 2030 targets of 73 gigawatts. Does Vietnam have new feed-in tariffs for solar power?

April 2025 | Southeast Asia Impact Alliance Vietnam is taking another step toward modernizing its renewable energy sector by unveiling updated feed-in tariffs (FiTs) for solar power, with a notable emphasis on encouraging battery energy storage systems (BESS).

What is the new tariff structure for solar projects in Vietnam?

Under the updated tariff structure, solar projects are now divided into ground-mounted and floating categories, and segmented further by region—North, Central, and South Vietnam. Tariffs are calibrated based on solar resource availability, infrastructure costs, and local electricity demand, with higher rates awarded to projects that integrate ESS.

Could Vietnam replace fixed feed-in tariffs with standardized auctions?

As global costs for solar, wind, and battery storage systems fall, Vietnam could replace fixed feed-in tariffs (FiTs) with standardized competitive auctions to procure clean energy at the lowest cost.

Why has the Vietnamese government temporarily suspended solar projects?

To address the rapid growth and grid capacity issues, the Vietnamese government has temporarily suspended new approvals for large-scale solar projects. This measure aims to manage the grid's ability to integrate new capacity and transition from the FiT scheme to an auction-based system for project approval and pricing.

Is subsidy reshaping Vietnam's Electricity sector?

The rapid, subsidy-driven expansion has exposed gaps in planning and financial sustainability – laying the groundwork that is now reshaping the sector's trajectory. The state utility Vietnam Electricity (EVN) is now under financial strain due to the tariffs it set, which were as high as USD9.35 cents per kilowatt hour (¢/kWh).

What is Vietnam doing with feed-in tariffs?

Beyond the feed-in tariffs (FiTs), Vietnam is also offering policy incentives to catalyze investments in innovative energy solutions. According to Decree 58/2025/ND-CP, projects involving 100% green hydrogen or green ammonia can access preferential treatment, including:

Government subsidy for pv storage container in Vietnam

[Commerce finds Chinese cross-border subsidies. ...](#)

The U.S. Department of Commerce reports it has uncovered improper cross-border subsidies from China to curb costs of its companies' solar technology factories in Vietnam, prompting the agency to dramatically and ...
