

# How much energy do solar panels save

## Overview

---

Are solar panels good for the environment?

Solar panels aren't just good for the environment; they can also seriously reduce your electric bills. How much money you save varies on several factors, including your location, current energy usage, the size of your solar panel system, and, most importantly, the price you pay for electricity.

How much does solar electricity cost?

By comparison, the average cost of home solar electricity purchased on solar.com is around 8 cents per kWh — although it varies based on the size, complexity, and location of the project. Keep in mind, grid electricity prices continue to rise over time. Typically, utility rates rise at an average rate of 3% per year.

How much money do solar panels save?

How much money you save varies on several factors, including your location, current energy usage, the size of your solar panel system, and, most importantly, the price you pay for electricity. For example, if you currently pay \$150 a month for electricity, you'll save about \$83,000 on bills over the next three decades.

Are solar panels a good investment?

Solar panels are an expensive initial investment but provide significant savings on energy bills over time. Depending on your area's electricity costs, you could save between \$34,000 and \$120,000 over the lifetime of your solar panel system. The higher your local electricity prices, the greater your potential for solar savings.

Can solar panels save you money on electric bills?

When you multiply that by the national average electricity rate of \$0.17 per kWh, you'll find that the typical American family has a monthly electric bill of

around \$152. This means if enough solar panels were installed to cover this electricity usage, the average household could save almost \$1,820 a year on electric bills!.

Do solar panels pay for themselves?

For example, if your system costs \$16,000 after incentives and saves you \$2,000 per year on electricity bills, your solar panels will “pay for themselves” in eight years. Assuming your solar panels produce energy at roughly the same rate over 25 years, you’d net \$34,000 in savings over the long term.
