

How to install solar system

Overview

How to install solar panels?

The basic system is to start with the installation of a rack or platform. If the panels are roof-mounted, a roof racking system is first installed. A ground platform is needed if the panels are ground-mounted, and installing the solar panels is not difficult. What is more difficult is wiring them.

Is a DIY solar panel installation a good idea?

A DIY solar panel installation is not the best option if you still rely on utility energy, which most people do. Installing solar panels without the proper expertise can lead to major issues that may cost you more in the long run.

Should you install solar panels yourself?

You can install solar panels yourself, but doing it alone involves risks—especially when working against a deadline. Incentives can drastically lower your overall cost, but solar is still a big investment. To save money, it's no surprise that many homeowners consider a DIY approach.

How long does it take to install solar panels?

With typical solar installations taking two to three months and high demand expected as the deadline approaches, you need to act quickly to secure this incentive. Installing solar panels can dramatically reduce or eliminate your monthly electric bills while powering your home with clean, renewable energy.

How do you secure a solar panel?

Many slide onto the solar frame railings and then tighten to hold the panel in place. The end brackets will have a spot to hold a single panel, and the middle brackets will have a spot to secure two panels. Some solar panel kits may use single panel brackets.

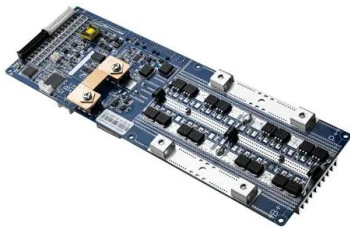

How do I choose a solar system for my home?

Assess your energy needs. Begin by looking at your energy bills to find your annual electricity usage. Besides small grid upkeep and transmission fees in most areas, PV installations can lead to solar savings that eliminate nearly all of your utility energy spending. Evaluate your home's solar potential.
