### [10 Fascinating Facts About Our Solar System](#)

10 Fascinating Facts About Our Solar System  
Forget textbook platitudes: our Solar System is a laboratory of physical paradoxes where mass, motion, and matter stage spectacles that challenge classical intuition. A single ...

### Solar System

Planets and dwarf planets of the Solar System. Compared with each other, the sizes are correct, but the distances are not The Solar System is a group of space objects that are held together by gravity, with the Sun in the center. The Sun is ...

### Planet Facts - The Planets In Order

Planet Facts - The Planets In Order Our solar system has eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. With the exception of Uranus and Neptune, each of these planets can be seen unaided. All eight ...

Definition  
Formation and evolution  
General characteristics  
Sun  
Inner Solar System  
Outer Solar System  
Trans-Neptunian region

The Solar System consists of the Sun and the objects that orbit it. The name comes from Sol, the Latin name for the Sun. It formed about 4.6 billion years ago when a dense region of a molecular cloud collapsed, creating the Sun and a protoplanetary disc from which the orbiting bodies assembled. The fusion of hydrogen into helium inside the Sun's core releases energy, which is primarily emitted through its outer photosphere. This creates a decreasing temperature gradient a...

### [The Planets: Interesting Facts about the Eight Planets](#)

The Planets Of The Solar System This website is an easy-to-follow overview of the historical, scientific, cultural and mythological facts of our solar system. Topics include space facts, the planets, galaxies, black holes and other objects found ...

### [Our Solar System: A Tour of All the Planets](#)

The solar system is our cosmic neighborhood, a sprawling and dynamic family of celestial bodies orbiting a single, blazing star: the Sun. It's a place of fire and ice, storms and stillness, desolation and beauty. The planets, ...

### [Solar System: Planets, Moons, and the Sun Explained](#)

With each planet, moon, asteroid, and comet, the solar system tells a story of birth, destruction, rebirth, and motion--stories written in craters, frozen oceans, swirling storms, and planetary rings.

### Solar System quick facts

Our Solar System contains planets, comets and asteroids all of which travel around our star, the Sun. Until 2006 nine main planets were listed, but under the current classification there are now only eight main planets and five 'dwarf ...

### In Depth , Our Solar System - NASA Solar System Exploration

Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune; dwarf planets such as ...

### Facts About the Solar System

The Sun holds 99.8% of the solar system's mass, and Jupiter is the next largest object. There are four terrestrial and four gas or ice giant planets in our solar system. Mercury and Venus are the only planets without moons.

### The Solar System

Our Solar System includes the Sun and the planetary system revolving around it. A "planetary system" is a group of non-stellar objects (planets, dwarf planets, moons, asteroids, meteoroids, comets and cosmic dust) that orbit around a ...

### **Planets in Order From the Sun , Pictures, Facts, and ...**

In addition to the planets, our solar system also includes dwarf planets, moons, asteroids, comets, and meteoroids. Our planetary system is the only official solar system in the Universe, but astronomers continue to find thousands of other ...

### **Solar System Facts**

Learn about the formation, structure and composition of the solar system, which consists of the Sun, planets, dwarf planets, moons, comets and asteroids. Find out more about the solar system's objects and events, such as eclipses, ...
