Overview

Astronomers sometimes divide the Solar System structure into separate regions. The includes Mercury, Venus, Earth, Mars, and the bodies in the . The includes Jupiter, Saturn, Uranus, Neptune, and the bodies in the . Since the discovery of the Kuiper belt, the outermost parts of the Solar System are considered a distinct region consisting of .

Information about solar system and planets

[Solar System Planets , Information Cards](#)

Hey Teachers! We've created a new resource for your classroom. It consists of 8 information cards with the main characteristics about the Solar System planets. These characteristics are: size, number of moons, ...

[Our Solar System: A Tour of All the Planets](#)

The solar system is our cosmic neighborhood, a sprawling and dynamic family of celestial bodies orbiting a single, blazing star: the Sun. It's a place of fire and ice, storms and stillness, desolation and beauty. The planets, ...

Solar system , Definition, Planets, Diagram, Videos, & Facts

3 ???· Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own satellites; ...

Solar System quick facts

Our Solar System contains planets, comets and asteroids all of which travel around our star, the Sun. Until 2006 nine main planets were listed, but under the current classification there are now

only eight main planets and five 'dwarf ...

[The Planets In Order , From The Sun, Information. ...](#)

In our Solar System, there are eight planets. The planets in order from the Sun based on their distance are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. The planets of our Solar System are ...

Planet Facts

The largest planet in the solar system is Jupiter, followed by Saturn, Uranus, Neptune, Earth, Venus, Mars with the smallest being Mercury. The table below shows the size of the planet, how far it is from the Sun and how long it takes to ...

The Solar System

Our Solar System includes the Sun and the planetary system revolving around it. A "planetary system" is a group of non-stellar objects (planets, dwarf planets, moons, asteroids, meteoroids, comets and cosmic dust) that orbit around a ...

Planet Facts - The Planets In Order

Planet Facts - The Planets In Order Our solar system has eight planets: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus and Neptune. With the exception of Uranus and Neptune, each of these planets can be seen unaided. All eight ...

Interesting Facts about the Solar System

Our solar system is a good example to understand exoplanets: Exoplanets are very far away and look tiny even using the most powerful telescopes. Examining planets in our solar system such as Jupiter, that have miniature solar systems, ...

Planets in Order From the Sun . Learn About The

Our solar system is made up of 8 planets that orbit the Sun. Learn about all the planets in order from closest to farthest! Find images, facts, and useful information about each planet, and its moons if it has any, and go ...
