

Install solar power panels

Overview

How do I install solar panels?

Ground-mounted panels can be installed anywhere with good sun exposure and enough open space. A minimum of 350 square feet is usually required. Installing solar panels requires the following steps: Plan the solar energy system based on the home's size, location and energy needs. Measure, cut and assemble the support structure for the solar array.

How do you activate a solar system after installation?

After solar panel installation, the system needs to be activated. This involves interconnecting the solar panels, installing the inverter, and commissioning the system. During this step, note that as long as the solar panels are receiving sunlight, they have an open circuit voltage. Be careful when handling them.

Is a DIY solar panel installation a good idea?

A DIY solar panel installation is not the best option if you still rely on utility energy, which most people do. Installing solar panels without the proper expertise can lead to major issues that may cost you more in the long run.

How do I get solar power?

Here are the steps to take to get powered by sunshine. Choose a solar installer. An installer can help you determine if your roof is suitable for solar panels. Start by researching qualified, insured installers online or ask for recommendations from people who have gone solar. Comparison-shop by asking multiple installers to come assess your roof.

How do you install a solar racking system?

Installers add landscaping pavers or concrete blocks to the bottom of the system's frame to hold the frame and top solar panels in place. You can adjust the panels on this racking system between 5 and 30 degrees, depending on

the type of panel and the manufacturer. You also have the option to install a dual-orientation (east and west) system.

How do I install a solar power inverter?

Connect the solar power inverter to the electrical system. Apply weather sealant to the equipment being installed. Activate and test solar energy systems. Solar installers should be certified to work with electricity at high elevations according to best safety practices:
