

# **Large portable solar panel stand**

## Overview

---

What is a portable solar panel stand?

A portable solar panel stand is one of the most beneficial upgrades anyone can do to a portable solar system. Having used many solar generators, I have had to charge them with solar panels many times.

How to make a portable solar panel stay in place?

The easiest way to make a portable solar panel stay in place is by using an adjustable stand. It gives you the flexibility to control the angle of the solar panel system. It is a beneficial upgrade that you can make to your existing solar panel system.

How many solar panels can the stand hold?

The stand is designed to be strong and steady, with minimal material used. It can hold four solar panels at once. You can make it from 1/2" plywood, a 1" x1/2" back brace, and a 1/2 "x1/2" front brace to hold the panels in place.

How much does a solar panel stand weigh?

Lifting the entire frame will not work with rigid solar panels on it. The 100-watt rigid panels generally weigh between 16 and 20 pounds each. With five solar panels on the stand that would mean that the solar panels would weigh 80lbs on the low end. Then adding the 15lbs for the solar panel stand it weighs a total of 95 pounds.
