Mobile pv generator turnkey solution price in Norway

Mobile PV generator
turnkey solution
in Norway

Overview

What is the power price in Norway in 2040?

The 2040 power price in Norway is modelled to be 39 ± 4 €/MWh. Market value of Norwegian hydropower is 34% higher than the average power price. Seasonal patterns for solar PV give <3% probability of revenues higher than the LCOE. On/offshore wind has a 50%/1% probability of having revenues higher than the LCOE.

How much does power cost in Norway?

The mean annual Norwegian power price from the Monte Carlo simulations is estimated to be 39 ± 4 €/MWh and long-term price levels below 23 €/MWh or above 50 €/MWh seem highly unlikely in an average weather year.

Which parameters affect the electricity price in Norway in 2040?

The results from the Morris sampling procedure show that the three parameters with the largest impact on the electricity price in Norway in 2040 are the natural gas price (66), the carbon price (29), and onshore wind investment costs (31). Fig. 4. The standard deviation and the absolute value of the mean of the elementary effects plotted together.

What is the price effect of increasing hydropower capacity in Norway?

Generation capacity The price effect of increasing the installed capacity in Norway is between -0.03 €/MWh and -0.69 €/MWh per GW of additional capacity, depending on the technology. The highest price sensitivity is observed for increased capacity of highly flexible hydropower plants.
