

Mobile solar unit quotation in Vietnam 2026

Overview

Installations completed between 2025 and 2026 will be eligible for a tariff of 1,320 dong per kilowatt-hour (kWh), roughly 5.5 cents/kWh. How much solar power does Vietnam have in 2024?

Installed Capacity in 2024: As of 2024, Vietnam's installed solar power capacity is approximately 16.5 GW. This capacity represents a significant increase over previous years due to both domestic and foreign investment in renewable energy projects. **Growth Rate:** Since 2020, Vietnam's solar industry has grown at an average annual rate of around 25%.

How much solar power does Vietnam have?

According to the International Renewable Energy Agency (IRENA), the installed solar power capacity, which is the maximum capacity that a solar system is designed to run at in Vietnam, accounts for more than a third of Vietnam's total renewable energy capacity at 18,854 GW in 2023.

What is the market share of solar power in Vietnam?

Market Share: Solar power constitutes about 25% of Vietnam's total power generation capacity. In the broader energy mix, renewables (including hydro) account for approximately 42%, while solar and wind together contribute around 13% of the country's electricity generation.

How many rooftop solar projects are there in Vietnam?

Vietnam currently has approximately 103,000 rooftop solar power projects across residential, commercial, and industrial buildings, boasting a total installed capacity of over 9,500 MW. By 2030, Vietnam aims to significantly increase its solar capacity, projecting that 50 percent of households will have rooftop solar installations.

How is solar energy regulated in Vietnam?

Vietnam's solar power sector is governed by a number of key regulations and

policies aimed at promoting the development of renewable energy while managing the challenges associated with rapid growth.

How much energy does Vietnam need in 2027?

of 10.9 per cent to 2027 (see Figure 1). Its primary energy demand is expected to increase from 67.7 Mt in 2010 to 186.0 Mt in 2035, an annual growth rate of 4.1 per cent, while its final energy demand has an expected C ent over he same period4. 2026605.299Figure 1.
