Off grid solar systems qld

Overview

How does off-grid solar work in Queensland?

In Queensland, the sun shines for an average of 2,600 hours per year, making it an ideal location for installing off-grid solar. Off-grid solar systems work by using solar panels to convert sunlight into electricity. This electricity is then stored in batteries, which can be used to power your home or business even when the sun is not shining.

Who are off-grid solar installers?

We supply, design and install off-grid systems for clients throughout QLD, including those who are situated in remote areas without grid access. Our off-grid solar installers are in-house staff and accredited by Solar Accreditation Australia (SAA), so you can have peace of mind knowing that your system will be installed correctly.

What is an off-grid Solar System?

High performance, high quality off grid solar systems. Standalone solar power solutions cater to individuals or businesses seeking independence from the conventional electricity grid. As experts in off-grid solar setups, we specialise in crafting, installing, and maintaining customised solar-powered standalone systems tailored to your needs.

How much does an off-grid solar system cost?

The cost of an off-grid solar system depends on the size and components of the system. Generally, an off-grid residential solar system can range from \$10,000 to \$50,000. If you're looking to live independently and off the grid, we offer high-quality, reliable solar systems that cater to suit you and are fit to last the test of time.

Can a remote business benefit from an off-grid solar energy system?

Remote businesses, especially those in rural Queensland, can benefit greatly

from a complete off-grid solution with battery storage. Your energy usage and requirements will determine the scale and design of the off-grid solar energy system that GES Energy will design and install for you.

What is the best off-grid system in QLD?

3. Large Home Off-Grid System (18-32kW) The Large Home Off-Grid System is the most popular off-grid solution among our clients in QLD. With a storage capacity of 18-32kW, it is ideal for standard three or four-bedroom homes, small businesses, farmhouses, and stations.
