

Pole solar panel mount

Overview

What types of solar panels are compatible with a pole mount?

Smaller solar arrays can be mounted on the side of a pole. This can be a great option for one or two solar panels, for example for a small cabin or water pumping system, or any remote system with unique location challenges. A top of pole mount can hold from 1 to 15 solar panels on a single pole.

What are the benefits of using a solar panel pole mount?

Pole mounts are easy to install and can provide a way to mount your solar panels so that they are still off the ground and away from harm. They are also easier to get to than panels on your roof for when you are adjusting the angle or cleaning snow or debris off of them.

How does a pole mount secure a solar panel?

A pole mount solar installation is also the easiest to equip with a sun tracking system that will ensure maximum exposure — and maximum productivity — over the course of the day. Because the panels are raised off the ground, pole mount systems allow for easier maintenance and cleanup.

Pole solar panel mount

[SolarPanelPoleMount Solar Pole Mounts for ...](#)
