Portable pv system EPC service price in Switzerland

Overview

Why should you hire a photovoltaic EPC contractor?

Having one contractor to handle photovoltaic EPC means being in control of every stage in project development, with close supervision over logistics, regulations and construction issues. Secure long term performance by choosing an advantageous operations and maintenance plan. What makes Telenergia a leading EPC contractor?

How does EPC work?

The project development usually ends with the handover of the development documents by the project developer to us, the EPC service provider, as part of the "technical due diligence package". Our EPC scope of work typically ends with documentation, acceptance and transfer to the operational phase.

What is EPC management?

As part of EPC management, we provide support in the professional tendering of components and construction services as well as in the negotiation of contracts with suppliers. During the construction phase, we control and coordinate all trades and deliveries within the framework of coordinated logistics and time management.

What makes KPV high performance modules so special?

KPV modules withstand highest snow loads (5400 Pa) and are extremely hail resistant (twice the IEC requirements!) All main components of these KPV high performance modules are of European origin, thus guaranteeing superior product quality for an extremely long life time.

How does the EPC scope of work end?

Our EPC scope of work typically ends with documentation, acceptance and

transfer to the operational phase. Of course, we are still available to answer on any queries. And if something does not work as planned, we support you as a reliable partner and comply with our contractual obligations.
