

# **Power container quotation in Luxembourg 2026**

## Overview

---

What drives the uptake of shore power in the container sector?

Shoreside investments and regulation are the key drivers behind the uptake of shore power in the container sector. A huge driver is the FuelEU Maritime Regulation, whereby from 2030, passenger and container ships must use onshore power (OPS) at Trans-European Network (TEN-T) ports when moored for more than two hours.

When will Ops become a requirement in the container sector?

By 2035, this requirement extends to all EU ports where shore power is available. As Wärtsilä marine director, electrical and power systems business Torsten Büssow says, "The adoption of OPS in the container sector will increase, but how and when will largely depend on shoreside investments, driven by regulatory mandates.

How much capacity does the EU need for containerships & passenger ships?

The EU's impact assessment suggests containerships and passenger ships alone would require 5.6 GW of capacity to meet their mandates, which could come from new projects or better utilization of existing facilities.

How much power does a containership need?

The average shore power demand for all containerships combined is approximately 600 kW when excluding data from EMSA, with power demand varying between 60 kW to over 3,800 kW.
