Designed for high-power applications, these containerised generators offer a secure, transportable solution for large-scale power needs. Ideal for industrial sites and backup power for critical infrastructure, they provide robust performance in a compact footprint. QPower is a leading generator.

45.5% of New Zealand's primary energy supply came from renewable sources, a record high. Renewable generation capacity increased by 556 MW in 2024. Up 17% or 1262 MW from 2020. 85.5% of electricity was generated from renewable sources, down from 88.1% in 2023. Electricity consumption in the food.

As New Zealand heads into winter 2025, electricity market conditions remain tight due to low hydro storage, constrained gas supply, and infrastructure bottlenecks. Regulatory initiatives are underway to improve hedge market liquidity and strengthen retail competition, but volatility is expected to.

Here's a prediction we think we can bet on – 2025 will go down as a historic year for both solar power and household electricity expenses. Why?

While there is a long list of many big and small factors, two factors are the most important – the rate at which grid power prices are shooting up, and the.
