# **Price of the solar panels**

## Overview

---

Today's premium monocrystalline solar panels typically cost between 30 and 50 cents per Watt, putting the price of a single 400-watt solar panel between \$120 to \$200, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.25 per Watt.

Today's premium monocrystalline solar panels typically cost between 30 and 50 cents per Watt, putting the price of a single 400-watt solar panel between \$120 to \$200, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.25 per Watt.

How much do solar panels cost in 2025?

Take control of your energy costs with solar power. Solar panels generate "free" electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025.

Solar panel costs range from \$16,600 to \$20,500 for the average 6.5 kW system, but prices can vary from as little as \$7,700 for smaller solar systems to upward of \$34,700 for larger systems. To find the most up-to-date solar panel costs in 2025, we compared research from the U.S. Department of.

The price of solar panels has declined substantially over the last decade as the industry has matured and reached production at the largest global scale. Since 2010, the cost to install solar panels on a home has fallen by roughly 50%. Costs rose slightly from 2020-2023 largely due to supply chain.

Solar panels cost between \$15,000 and \$22,500 before incentives for an average 2,000-square-foot home in the U.S. The MarketWatch Guides team obtained this data by surveying homeowners with installed solar systems nationwide. The actual price you will pay depends on a number of factors, including.

IRENA presents solar photovoltaic module prices for a number of different technologies. Here we use the average yearly price for technologies 'Thin film

a-Si/u-Si or Global Price Index (from Q4 2013)<sup>1</sup>. IRENA (2024); Nemet (2009); Farmer and Lafond (2016) – with major processing by Our World in Data.

The average cost of a residential solar panel system ranges from \$18,000 to \$43,000, depending on the system size, location, and available incentives. Typically, a 6-8 kW system—suitable for an average 2,000-square-foot home—will cost between \$15,000 and \$22,500 before applying any incentives. How much do solar panels typically cost?

The average cost to install solar panels in the United States is about \$12,000 after federal tax incentives. On the low end, you can install a smaller system for around \$5,000, while a high-priced Tier 1 solar panel system can cost \$40,000 or more. There are additional costs that go into an installation project beyond the price of panels.

Are solar panels worth the investment?

For most people, solar panels are worth the investment, but they may not be right for you in some rare circumstances. However, even renters may have solar options if their property owners or managers are open to it – and if not, they might be able to sign up for community solar projects near them.

How much does it cost to produce solar energy?

Solar panels cost \$1.77 to \$2.20 per watt and a 6 kW solar panel installation for the average home costs from \$10,626 to \$13,230 after the 30% federal solar tax credit. Solar energy costs \$0.08 to \$0.10 per kWh to produce on average, depending on your location.

What is the average cost of solar energy per kWh?

Solar systems have ratings based on the electricity produced annually in average conditions. Residential solar energy costs \$0.08 to \$0.10 per kWh on average, and commercial or utility-scale solar power costs \$0.06 to \$0.08 per kilowatt-hour.
