The economic case for green energy in Greece is compelling, driven by a combination of falling technology costs, rising electricity prices, and the potential for energy independence. Let's break down the economics of solar panel installation for a typical Greek property: These figures demonstrate.

Greece is the European Country with the most Sunny hours per year, therefore it is feasible for a residence to become fully autonomous (concerning electrical

power) by installing an off-grid solar photovoltaic system. Photovoltaic systems can be separated in two big categories: On-Grid and Off-Grid.

Off grid or autonomous photovoltaic systems, for home and craft applications or special specifications and requirements to meet any energy needs in any type of installation that are either not connected to the public electricity grid or want to meet part of their energy needs with photovoltaic.
