

Ring battery solar panel

Overview

Does ring use a solar panel?

So, when installing a Ring device with which you'd use the solar panel, choose Battery Mode and not Wired. There's also the fact that when you pick Battery Mode, the camera uses a motion detection method that helps save battery power.

How does the ring solar panel work?

The latest Ring Solar Panel with upgraded solar technology keeps your camera charged longer with up to 60% faster charging than the previous generation. Works with Outdoor Cam Plus, Outdoor Cam (Stick Up Cam), Stick Up Cam Pro, Spotlight Cam Plus, and Spotlight Cam Pro using the built-in USB-C connector.

Can a ring solar panel charge a battery?

Yes! As previously stated, your Ring solar panel can charge your battery, but depending on the device and the amount of sunlight available, filling up that battery may take anywhere between two to four hours. Sometimes, depending on the levels of sunlight, even more.

Do I need a solar panel for each ring camera?

Yes! You do need one solar panel for each Ring camera. Solar panels and chargers are made to work with just one device at a time. So, if you want to use the solar option for multiple cameras, you'll need a separate solar panel or charger for each camera. Each camera needs its own sunny buddy to keep it charged and running.

How do I know if my solar panel is charging my camera?

Pro Tip: According to Ring, the solar panel starts charging your camera when its battery drops below 90%. Until then, your camera uses its stored power. To see your battery percentage, simply: Open the Ring app on your phone. Choose the Ring device connected to your Solar Panel.

Why does ring not recognize a solar panel?

When you choose the Wired mode during installation, the Ring app might treat the device as a wired device and, as such, not recognize the solar panel when it's connected. So, when installing a Ring device with which you'd use the solar panel, choose Battery Mode and not Wired.
