

# **Self adhesive solar film**

## Overview

---

Can self-adhesive film reduce glare on solar panels?

Germany-based Phytonics has developed a self-adhesive film with microstructures to reduce glare on PV modules. It is available in sheets and rolls for new and existing PV systems. From pv magazine Germany The glare effect of solar panels often causes disputes between neighbors.

Can self-adhesive film be used for PV systems?

Phytonics says the self-adhesive film can be used for both new and existing PV systems. It says it sees great demand for its flexible anti-glare solution, which extends across all photovoltaic segments.

Can solar film be used on building surfaces?

This ready-to-use solution can be used on various building surfaces. The solar film has an integrated backside adhesive, which means that it can be easily glued on the surface and can be connected and used immediately due to the integrated connection cables.

What is a solar film?

Unlike conventional solar panels, solar films offer a level of flexibility and adaptability that was previously unattainable, marking a significant leap in solar technology. Heliatek, a German brand established in 2017, introduced HeliaSol, an ultra-thin, flexible solar film resembling a sticker.

Are solar films paving the way for a more environmentally friendly future?

Solar films are paving the way for a more adaptable, efficient, and environmentally friendly future in solar energy. With their flexibility, ease of installation, and reduced carbon footprint, these films are set to transform the way we harness solar power, making it accessible to a broader range of applications and structures.

## What are the advantages of Solar Films?

The ease of installation is a key advantage of solar films. HeliaSol, for instance, can be applied to various materials, including metal, concrete, and glass, in just a few simple steps. The integrated backside adhesive and junction box with cables simplify the installation process, which can be completed in a few hours.
