What are some misconceptions about solar panels?

Forbes Home has tackled the top misconceptions about solar panels, which might make you give solar panel installation a second look. 1. Solar Panels Don't Work When It's Cloudy No one likes a sunless, cloudy day. But your solar panels don't mind.

What happens if your solar energy system doesn't supply enough electricity?

This means that if your solar energy system doesn't supply enough electricity, the grid will supply the rest. Myth #2: Solar panels aren't efficient enough. Some customers hear that solar panels have an efficiency rate of 22% and wonder why it's not 100%.

Does solar work if it's raining?

Here are some common myths and misconceptions: Myth #1: Solar only works when the sun is shining. I still need power when it's raining. Actually, solar technology can be leveraged in virtually any condition, including rainy and snowy days, because some sunlight still reaches the earth.

Will solar panels ruin my roof?

Solar Panels Will Ruin My Roof Solar panels actually protect and preserve your roof. When installed, they are just mounted on top of your roof and can be removed easily. However, it's important to check your roof before installation to ensure it is not damaged and is in good shape to hold solar panels.

Do solar panels affect your electricity bill?

You'll Have No More Electricity Bills Just because you get solar panels installed doesn't mean you can completely say goodbye to your electricity bill. However, you will see a dramatic drop in your grid-connected electricity bill. Installing solar also may mean you'll get credits from your utility provider through net metering.

## Are solar panels going off the grid?

Installing solar panels on your home may seem like you are finally going off the grid, but in many cases, you're not. A grid-tied system, which is common in residential areas, means you're still connected to the grid but you benefit from a lower electricity bill.
