How do I install a solar photovoltaic system?

Installing solar photovoltaic systems requires specialized skills and knowledge. Installation should only be performed by qualified personnel. Before installing a solar photovoltaic system, installers should familiarize themselves with its mechanical and electrical requirements.

How do I install JA Solar panels?

JA solar recommends installing the modules with a tilt angle of at least 10 degrees, making it easier for dust to be washed off by rain. Ensure the installation method and supporting system of modules is strong enough to make the modules can withstand all the load conditions. The Installer must provide this guarantee.

How do I install a solar module?

Place a module mounting clip (AD801) into the support rail. Make certain that the lip of the module clip captures the front cover as shown. Each module clip should be located approximately 8" (200 mm) in from the edge of the solar module. Insert an M8 bolt through the clip and rail, and secure to threaded tab (AD105).

Which direction should a photovoltaic module be installed?

When installing photovoltaic modules in the northern Hemisphere, the optimal installation direction of the module is to face south; When installing photovoltaic modules in the Southern Hemisphere, the optimal installation

direction of the module is to face north. Serial connected PV modules should be installed in the same orientation and Angle.

Do you need a professional to install and operate solar modules?

The installation and operation of solar modules requires professional skills, and only qualified professionals can perform this work.
