Solar panel with charger

Overview

What are the best solar panel chargers?

There are several types and styles of solar panels and power banks, but the best solar charger is the GoalZero Nomad 7 Plus, a portable solar panel that's a favorite of backpackers and outdoor enthusiasts.

What do you need to consider when purchasing a solar panel charger?

A wattage between 10 watts and 15 watts of power is a good rule of thumb when looking for a solar phone charger. The size of your charger is important! Because you'll generally be using a solar phone charger on the go, the size and weight are important.

What are the features of a good solar panel charger?

Solar panel chargers are also relatively lightweight, and often fold away for easy storage. Some models even have room inside to store other small items, including your actual charging cord. Solar panel chargers vary in their use, along with what devices they can support, and how many at one time.

What are the pros and cons of solar chargers?

The best solar chargers bring you freedom. You're no longer stuck near wall outlets to stay powered up and racking up higher power bills as you make sure your gadgets are filled with juice. Instead, a solar charger can soak up the sun's rays and convert that into the energy to keep your gadgets on the go.
