

# Solar panels and installation

## Overview

---

How do you install solar panels?

The five main steps to installing a solar panel system include: an engineering site visit, permits and documentation, ordering equipment, the solar panel installation, and approval and interconnection. Your installation will follow these five main steps whether you choose to finance your system with a lease, loan, or cash purchase.

How do you connect solar panels to the house?

The conduit connects the solar panel or array to the house or battery backup system. You can dig the trench or run the pipes now or at the end of the process. It is better to do all of that now, run the wires through the conduit and leave them unattached until you are ready to connect them.

What is the best location for solar panels?

The best angle for solar panels will depend on where you are in the world. Direct south is best for most applications. Because the sun moves throughout the day, the south is the best location unless you use solar trackers. Tip: Improve solar locations with sun trackers.
