

# **Solar panels exline installation**

## Overview

---

### How do I install solar panels?

Ground-mounted panels can be installed anywhere with good sun exposure and enough open space. A minimum of 350 square feet is usually required. Installing solar panels requires the following steps: Plan the solar energy system based on the home's size, location and energy needs. Measure, cut and assemble the support structure for the solar array.

### How does the Tesla Solar panel installation process work?

The Tesla solar panel installation process begins with scheduling and preparing for your installation prior to your actual installation day. Once your system design is finalized and we have the necessary approvals to move forward with your project, we will schedule your installation on the first available date.

### How do I prepare for my solar installation?

Clear your driveway and the area around your electrical equipment prior to your installation date. This may include removing or trimming back trees or bushes to provide our crew safe access when on site. Ensure no other contractors or workers will be on site during your solar installation.

### Can solar panels be installed on a roof?

If the roof is not suitable, homes can be equipped with ground-mounted solar arrays. Ground-mounted panels can be installed anywhere with good sun exposure and enough open space. A minimum of 350 square feet is usually required. Installing solar panels requires the following steps:.

### How long does a solar installation take?

Ensure no other contractors or workers will be on site during your solar installation. We cannot perform the installation if other workers are on site. Someone 18 years or older must be home during the first day of installation.

Most installations are completed within one day, but larger or more complex systems can take two or more days.

How do I install a solar power inverter?

Connect the solar power inverter to the electrical system. Apply weather sealant to the equipment being installed. Activate and test solar energy systems. Solar installers should be certified to work with electricity at high elevations according to best safety practices:
