

# **Solar panels when buying a house**

## Overview

---

Should you buy a house with solar panels?

Despite solar panels being more common than ever, many home buyers are still determining if buying a house with solar panels is a good idea. The truth is – it depends! Solar panels can increase the value of a property and can lead to low or no electricity bills, but it all comes down to who owns the panels and how they're financed.

Should you buy a solar home if you're not the original owner?

Solar will save almost all homeowners money, even if you're not the original owner. You might encounter one of four solar home scenarios when you're shopping for a house: fully-owned solar panels, leased solar panels, solar panels purchased with a solar loan, and PACE (Property Assessed Clean Energy) financed solar panels.

Should I buy a solar home if I can't afford a loan?

Paying that loan is money that can't go to your mortgage, meaning the mortgage a bank approves could be lower than the amount you need. If you cannot afford both a loan and mortgage payment, skip the solar home. Leased solar panels are the worst-case scenario when buying a house with solar panels.

Should you buy or lease solar panels?

Owning the solar panels on your house is the best financial decision, according to Consumer Reports, since solar panel lessees save less than those who purchase them outright. You might save some money up front with a lease, but you may lose that advantage when buying a home with existing leased panels.

Is buying a home with solar panels the right move?

Currently, solar power accounts for just 3.9 percent of total U.S. electricity

generation, but that number is rapidly growing. So is buying a home with solar panels the right move for you?

Well, that depends on some key factors.

Should you buy a home with a third-party Solar System?

When buying a house with solar panels, homebuyers should ask whether the solar system is owned outright by the seller or whether they would have to take over a lease' (SEIA vice president of markets and research, Justin Baca).
