

Solar panels with battery storage scotland

Overview

Are solar batteries a good investment in Scotland?

Your home battery storage system manages your energy requirements and makes it easier to make money from any excess energy that your panels generate. Therefore, installing solar batteries in Scotland could be a lucrative investment for your future.

Why do solar panels need battery storage?

Solar panels by themselves are merely energy collectors that collect energy from the sun for immediate use. Home battery storage ensures your PV system will harness the energy gathered and optimise it.

Do solar panels work in Scotland?

This means your home will reap the full benefits of every bit of energy produced by your solar panels as they charge your solar battery system which successfully stores it. The weather in Scotland makes your solar panels less efficient, it's not unusual to have overcast weather for days on end.

Why do solar panels need a battery in Scotland?

The weather in Scotland makes your solar panels less efficient, it's not unusual to have overcast weather for days on end. Therefore, it's wise to supplement your PV system with a solar battery or multiple batteries depending on the size of your array.

How long do solar panels last in Scotland?

Solar systems last around 25 years, with many systems containing recyclable elements. By installing a PV system and solar batteries in Scotland, you reduce your carbon footprint significantly. You can even make some money by selling your excess power back to the energy grid at the prevailing rate.

What is solar battery storage & how does it work?

Solar battery storage provides the ideal backup system and can increase your solar panels energy utilisation rate by between 30% and 85%. Your home battery storage system manages your energy requirements and makes it easier to make money from any excess energy that your panels generate.
