

Solar pond pump nz

Overview

Are our pumps customised for solar application?

Our pumps are customised for solar application. Apart from the very cheap models (under \$100) they are primarily designed for industrial applications, so are of rugged construction. They must always be immersed in water when operating to lubricate the ceramic bearings or they will be severely damaged.

How do I install a solar pond pump?

Put the pump in the water. (Tip - Place the pump on a brick so it is not right on the bottom of the pond. This stops the pump from sucking up all the gunk from the bottom of the pond.) Mount the solar PV panel where it can receive full sun at midday. Face the panel towards true north at an angle of approx 40 degrees.

Can a pond pump be run without water?

Warranty is void if the pump is run without water. This is one reason why we don't like fountains. Sometimes on a windy day spray from a fountain can fall outside the pond and the pond can be emptied very quickly. Our pumps connect directly to the panel, so when the sun shines (clear blue sky) they pump.

Solar pond pump nz

Aquapro Solar Pump and Panel Kit

2 ???· The Aquapro AP300SP Solar pump is a green friendly design, running directly from the energy of the sun. Built with a DC current motor and a brushless motor for high efficiency. The pump comes with an easy turn flow controller to ...
