Solar power for home

Overview

Why should you choose solar panels for your home?

Solar panels for home use increase energy independence and lower long-term electricity costs with the help of sunlight, additional hardware, and certified professionals. When considering solar panels for your home, finding the right system design and installer is essential to maximize your savings and investment in renewable power.

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

Can solar panels power a home?

Solar panels are used to power everything from calculators to sports stadiums to satellites — and they can just as easily be used to power a home. You don't need to be a rocket scientist — or anything close to it — to get solar panels for your home.

Will solar panels power my home at night?

But snow can be easily cleaned off or will melt quickly. Will my solar panels power my home at night?

No, your solar panels won't power your home at night. However, most home solar panel systems are sized to generate enough electricity during the day to cover the costs of nighttime energy usage under net metering.

Are solar panels a good idea?

Most homeowners will save tens of thousands of dollars by going solar. Solar

panels come with great incentives. What does it mean to "go solar"?

When you "go solar," you get a solar panel system installed on your property—usually on your home's roof, but sometimes on your land with ground-mounted solar. Why should you install home solar panels?

Do you need more solar panels for your home?

The larger the home, the more solar panels needed. When adding solar panels to an existing home, you can determine the customer's monthly energy consumption based on their power bills. For the most accurate estimate, divide the annual usage by 12 for the average monthly energy usage.
