

Solar power storage box quotation in France 2026

Overview

How much solar power does France have in 2024?

In 2024 alone, the country added 4.6 GW of new solar capacity, bringing its cumulative total to 22.1 GW.¹ This growth shows no signs of slowing. According to SolarPower Europe, France's operational solar capacity could reach 52 GW by 2028, implying an additional 30 GW of installations over the next four years.²

What is the future of solar energy in France?

Increasing demand for clean energy sources is one of the primary drivers for the solar energy market in the country. The solar power capacity is set to continue expanding with a target of around 18–20 GW installed by 2023. In 2021, France's solar PV installed capacity accounted for more than 14.71 GW.

Why does France have a new 10-measure plan for solar energy?

Solar PV has over 24.71% share of the total renewable energy mix. This is due to increasing projects on solar energy across the country. France has announced a new 10-measure plan to accelerate the development of photovoltaics energy, featuring new and existing provisions.

How much storage capacity will Europe have by 2026?

By 2026, the average scenario aims to achieve 300% increase in total installed capacity, reaching 32.2 GWh. The prospect instead in a high scenario is to reach more than 44 GWh. In order to accelerate the storage growth in Europe, a global storage strategy must be implemented to reach at least 200 GW by 2030.

What are the European residential storage markets in 2022?

In 2022, the 4 largest European residential storage markets are Germany, Italy, Austria and the UK, which from the medium scenario will also be confirmed in 2023. Sweden and Poland will probably reach 3rd and 4th place

in 2026.

How many MW will France allocate to solar power projects?

The French authorities are expected to allocate 450 MW for ground-mounted PV installations exceeding 5 MW in size, 180 MW for PV projects with an installed power of between 500 kW and 5 MW, and 70 MW for projects ranging from 500 kW to 10 MW, which will be built on parking shades.
