

Solar powered construction trailer

Overview

What is a mobile trailer solar power system?

A mobile trailer solar power system is a fully transportable solar power system designed to supply relatively small remote houses, radio repeater equipment, and other remote loads. Priced similarly to an installed system of the same capacity, it features 240VAC pure sinewave output and more than 4 days of battery backup capacity.

What components are included in a solar trailer?

A solar trailer includes a 210W to 250W solar panel, a Blue Sky Energy Solarboost 3024DiL MPPT solar regulator, and a Geltech deep cycle battery bank. The trailer also features a vandal resistant lockable equipment enclosure and an 8m extendable mast for communications antennae.

How tall is a solar trailer?

The solar trailer's driving height is just over 10'. With trailer pulling experience, this can be deployed by two people in less than 5 minutes, allowing you to get your powered trailer up and running rapidly and easily. Each Solar Platform can be customized to fit your specific needs.

Does a trailer Come with solar panels?

While this is a great selling feature, all it means is that a solar panel company paid for their proprietary solar panel plug to be installed during the manufacturing process. It doesn't mean that the trailer comes pre-equipped with any solar components, although it does come with a scary sticker warning you to only use their panels.

Which are the best solar powered camping trailers?

The Bowlus Road Chief, Bruder EXP-6, and Colorado are solar powered camping trailers that are popular choices. The Bowlus Road Chief features an aluminum skinned body, while the Bruder EXP-6 is a storm-proof off-road

trailer capable of accommodating adults of average and above-average height. The Colorado is also a solar-powered off-road teardrop trailer.
