

Solar powered cool box uk

Overview

What is a cool box and how does it work?

Cool box uses the sun's heat to power the chillers. This is particularly advantageous in two ways. When the sun is at it's hottest it can provide the most heat and the cool box system can provide the most cooling. The use of solar heat to power the chiller will reduce energy costs by orders of magnitude. Absence of grid electricity.

What is solar heat collection technology?

Our solar heat collection technology to use solar heat to replace gas and electrical heating, even under cloudy skies. Our refrigeration solution to preserve vaccines and medicines in developing countries. Want to know more?

.

Why should you use a solar freezer?

They are ideal for aid work or emergency relief. With remote locations and lack of energy supply, researchers and aid workers are faced with storage challenges in safely storing food supplies, agricultural products, medical supplies and freezing products. Our solar freezer is an ideal solution! Sale! Sale! Sale! Sale!
