

Solar powered outdoor space heater

Overview

Solar water heaters work by collecting and moving water via solar energy. These systems can be passive, using gravity and convection to naturally heat and move water through pumps, or active, where solar energy is used to move water through. There's also passive solar home design, which naturally heats water.

Solar pool heaters collect energy from the sun to heat a pool. These work by collecting and pumping pool water through a series of valves at the.

Solar air heaters (for heating a tent or a greenhouse, for instance) aren't available for purchase as of publishing, but you can make one with a few pieces of equipment. You can purchase a traditional portable heater that connects to electricity and attach it to a solar power.
