ers, can continue your studies and learn while at home. Activities, questions, directions, exercises, and discussions are carefully stated for you to understand to measure your prior knowledge on lessons in each SLM. This will tell you if you need to proceed on completing this module or if you need.

The document outlines a detailed lesson plan for a Grade 6 science class focused on comparing the inner and outer planets of the solar system. It includes objectives, subject matter, instructional activities, evaluation methods, and enrichment tasks. Key activities involve group work on gathering.

help you compare the planets in the solar system. The scope of this module permits it to be used in many different learning situations. The language used recognizes the diverse vocabulary level of students. The lessons are arranged to follow the standard sequence of the course. But the order in.

It is here to help you construct a model of the solar system showing the relative sizes of the planets and their relative distances from the Sun (S6ES-IVi-j-7). The scope of this module allows you to use it in many different learning situations. The language used recognizes the diverse vocabulary.

Students of all ages, but particularly those in middle school, have an innate curiosity about our nearest neighbors – the Sun and Moon – and about the eight planets, their moons, and asteroids, comets, and meteoroids within our solar system. Using the Earth in Space module by Carolina Biological.

This Self-Learning Module (SLM) is prepared so that you, our dear learners, can continue your studies and learn while at home. Activities, questions, directions, exercises, and discussions are carefully stated for you to understand each lesson. Each SLM is composed of different parts. Each part.
