

Solar tracker 3d model

Overview

What is a solar tracker?

A solar tracker is a device that tracks the position of the sun and controls the movement of the panel to maximize the direct sunlight falling on the solar panel. Solar Energy is extracted to the maximum level when the sun rays are directly made to fall on the solar panel.

What is solar tracker development?

Solar tracker development aims to reduce the weight of electronics in the largest possible number of photovoltaic modules. Both configurations (1Px90 & 2Px45) are limited by the number of modules per tracker, because at a certain size (sail surface) limitations become more evident.

What is a solar panel tracking system?

The Solar Panel Tracking System project is designed to optimize the collection of solar energy. The Solar Panel Tracking System project is designed to optimize the collection of solar energy by dynamically adjusting the orientation of a solar panel to follow the sun's movement throughout the day.
