

Step by step solar panel installation video

Overview

How to install solar panels?

The first step is to fix the mounts that will support the Solar Panels. It can be Roof-ground mounts or flush mounts depending on the requirement. This base structure provides support and sturdiness. Care is taken on direction in which the PV panels (monocrystalline or polycrystalline) will be installed.

How do I install my own solar panel array?

The easiest way to install your own solar panel array is to buy a solar panel kit. The main solar components that come with every solar power system or solar panel kit are: Solar Panels Solar panels convert sunlight into electricity through a process called the photovoltaic effect.

What should I know before installing a solar panel?

Use our solar panel installation guide for ensuring the safety of yourself and others throughout the installation process. Solar equipment can cause cuts, scrapes, lacerations, gouges, and puncture wounds. Use the proper equipment and remember to take breaks to avoid getting fatigued. Wear eye protection, gloves, and closed-toe boots at all times.

How do you ground mount solar panels?

Place the next panel on the rails, so that the clamps are wedged snugly between both panels. Tighten the clamps between the panels. Repeat this process for each panel in your array. Use the UFO with stopper sleeves attachment to secure the final panel in the row. If you decide instead to ground mount your solar panels, there are 3 key steps:.

How do you install solar panels on a flat roof?

For Sloped Roofs - a railed system is commonly used. This consists of attaching a set of rails to the roof to hold the solar modules. Flashings, screws and bolts are used to attach these rails by drilling the roof and using sealant

to prevent water leakage. For Flat Roofs - Installers use either ballasts or concrete blocks to rack the solar panels.

How to install solar panels in a sloping roof?

The whole mounting structure must be tilted and have an angle between 15 to 20 degrees to have maximum sunlight exposure. For countries in the Northern Hemisphere, the best direction to face solar panels is south because it gets maximum sunlight. So install the structure accordingly. For Sloped Roofs - a railed system is commonly used.
