## Overview

---

How much does a microgrid cost?

Or as S&C Electric's David Chiesa puts it: "If you've seen one microgrid, you've seen one microgrid." So there is no quick and simple price to give a prospective customer. Sources we've interviewed cite project proposals as low as \$250,000 to as high as \$100 million. Generation typically accounts for most of the cost.

Who develops container microgrids?

Another developer of container microgrids is Arizona State University (ASU) Associate Professor Dr. Nathan Johnson, who heads ASU's Laboratory for Energy And Power Solutions. Before beginning his faculty position at ASU, Johnson was an NSF Postdoctoral Fellow at HOMER Energy.

What is a modular microgrid?

In the ongoing effort to lower the cost of microgrid deployment, one concept that continues to evolve is that of the modular microgrid, best expressed in a system that can fit inside a single shipping container. It's not a new idea.

Is a microgrid more expensive than a small solar array?

True, larger microgrids will likely be more expensive than smaller microgrids — but in gross terms, not necessarily on a per kilowatt basis. In fact, generation for a very small microgrid tends to cost more per kilowatt than a comparable larger version. For example, a 50-kW solar array is more expensive per kilowatt than 1-MW solar array.
